68. DETAILS of freeze: cover in Florida; loss may be total. *Natl. Underwriter* 44: 19. Mar. 7, 1940. 284.68 N21

Estimates loss as 75 percent of the fruit on the trees. The only stock fire insurance company carrying the freeze risk was American of Newark. "Two classes of cover: Form A indemnified the grower against direct loss by freeze up to a specified amount per box, but not to exceed the market value of the fruit. Form B, protected packing houses and marketing agencies against loss of the regular service charges as fixed overhead expenses on at least three-quarters of the total crop under control. Rates ranged from 5 to 13 percent on individually owned groves and handlers, scaled down on limits of cover for the latter groups."

Flood coverage was first arranged in 1907 and proved successful for several years. There was a loss of about \$7,500 in 1910, and the following year when this region had one of its worst storms and payments amounted to more than \$50,000. As the premium volume and number of risks had not justified the lines which Lloyds had carried it was impossible for them to continue coverage for floods.
